## CORRUGATED PAPER PRODUCTS

Corrugated paper products are the most widely used packaging materials in the world. We produce various patterns of single wall, double wall, and triple wall sheet boards and boxes in addition to display boxes, paper pallets, and heavy duty packaging for customers in various industries. Our team specialises in providing customers with complete packaging solutions including integration of packaging materials and optimisation of packing and logistics processes.

**Corrugated Boxes** are the most common corrugated products, widely used for home appliances, food and beverages, household chemicals, etc. We design and produce reliable packaging boxes for specific needs, ensuring the best protection during the logistics process.

**Display Boxes** are produced with corrugated paper materials using various manufacturing processes, and are assembled into a standing display unit to showcase the customer's products. Key characteristics include lightweight, foldable, and simplified design of the structure.

**Paper Pallets** are free of fumigation and can be designed and produced in different structures and shapes to meet a customer's special needs. Paper pallets are 100% recyclable and lightweight, weighing only one tenth of wooden pallets of the same size. They are widely used for exportation, as well as in the food and beverage and consumer goods industries.

**Heavy Duty** packaging made out of high strength corrugated containerboard can replace the more expensive wooden case. We offer an array of heavy duty packaging products that are safe and effective, low in cost, recyclable, lightweight, easily stackable, highly shock-resistant, and nice in appearance.

## FLEXOGRAPHIC PRINTING

Flexographic printing is ideal for displaying your logo or company name on the packaging. You will receive your very own customised packaging in up to two colours.

## OFFSET PRINTING

Offset printing is capable of even more - whether internal, external or even all-around printing on corrugated board or cardboard packaging with up to six colours. It is also possible to achieve amazing finishing effects with special printing processes.
